

ELEVATE. INNOVATE. TRANSFORM WITH BMC HELIX SAAS SOLUTIONS ON AWS MARKETPLACE

Keeping up with the increasingly digital-first world means that modernizing your infrastructure has now accelerated from being a nice-to-have business requirement to a must-have. Moving to a private, public, hybrid, or multi-cloud environment is part of that journey, and for many enterprise organizations, that means turning to a cloud provider like Amazon Web Services (AWS) to host your always-on, on-demand, software-as-a-service (SaaS) applications.

The robust, integrated [BMC Helix](#) SaaS family of services and solutions for migration planning, cost efficiency, monitoring and observability, and application workflow orchestration is now available on the AWS Cloud to help you optimize and manage your AWS cloud investment and enable a data-driven business. Even better, BMC Helix is Impact Level 4, Impact Level 5 (IL-4/IL-5) and FedRAMP Moderate certified to support the enhanced requirements of public sector and commercial enterprises.

Why BMC Helix on AWS Marketplace?

Bringing together the unparalleled capabilities of the BMC Helix SaaS solutions with the scalability and reliability of AWS Marketplace, this dynamic duo can help you maximize your investments and modernize your business processes. Say goodbye to operational complexity and hello to streamlined workflows that empower you to focus on what truly matters: innovation and growth.

Key features and benefits:

1. **Seamless integration:** BMC Helix SaaS solutions seamlessly integrate with your existing AWS infrastructure, ensuring hassle-free deployment and onboarding.
2. **Unmatched scalability:** With AWS Marketplace's elastic scalability and BMC Helix's SaaS agile solutions, your business can effortlessly adapt to changing demands.
3. **Enhanced performance:** Harnessing the power of AWS's global network of data centers, BMC Helix SaaS solutions deliver optimized performance and reliability.
4. **Advanced security:** Get world-class protection for your business-critical data from BMC and AWS.

BMC Helix SaaS enables business modernization with solutions for:

Migration planning and cost efficiency: Plan, configure, administer, and manage the capacity of your AWS infrastructure to ensure optimal performance and cost efficiency with [BMC Helix Enterprise Service Management](#), a cloud-native SaaS solution designed to elevate user experiences across lines of business through intelligent automation, unified workflows, and rapid customization, and [BMC Helix Continuous Optimization](#), which uses intelligence and predictive analytics to manage and optimize IT resources and applications including those based on Pods, Kubernetes, microservices, containers, and multi-cloud services.

Monitoring and observability: Proactively improve the performance and availability of AWS services across public, private, or hybrid AWS environments with [BMC Helix Operations Management for AIOps](#), which tackles challenging hybrid-cloud environments and uses data from third-party solutions to rationalize topologies and help you find root cause and fix the problem fast.

Dynamic service modeling: Discover and model your cloud services running in AWS, hybrid, and multi-cloud environments with [BMC Helix Discovery](#), the market-leading IT asset discovery and dependency mapping that provides the deepest, most complete, real-time view of your IT estate using visual representation of business services for greater context.

Application workflow orchestration: Orchestrate complex application workflows and data pipelines across your AWS environments and beyond with [BMC Helix Control-M](#), which simplifies application and data workflow orchestration, making it easy to build, define, schedule, manage, and monitor production workflows while ensuring visibility and reliability and improving SLAs.
