

BMC STATEMENT: INDUSTRY DEVELOPMENTS IN AI-DRIVEN SECURITY RESEARCH

BMC is aware of recent industry discussion about the use of advanced AI techniques to identify software vulnerabilities, including initiatives such as Project Glasswing.

As part of normal security operations, BMC continuously monitors emerging research, threat intelligence, and industry developments related to software and supply chain security. These developments reflect an acceleration in how vulnerabilities may be identified across the industry.

BMC maintains a defense-in-depth security program and regularly evaluates opportunities to enhance controls and processes as technologies evolve. We engage with customers, partners, and the broader security community to remain aligned with industry best practices.

As new information becomes available, BMC will use its proactive notification process to help keep customers up to date.

To register for proactive notifications, please see the following BMC Support Central article:
