

LEARN AIOps WEBINAR SERIES

According to Gartner, AIOps has not yet reached peak hype! And yet, many IT Operations professionals are researching options and planning to implement an AIOps strategy to manage huge data volumes and complexity and realize significant benefits including faster MTTR and MTBF, improved service levels, reduced downtime and costs. But there's lots to consider before implementing an AIOps strategy – business drivers, prioritization of use cases, data sources, required skills, and more. How do you get started?

That's why we kicked off the 'Learn AIOps' webinar series – to meet the demand from IT Operations professionals looking for tangible ways to get value from AIOps and practical advice for deploying use cases. This webinar series is an opportunity for you to get AIOps education to help with your planning and learn what's needed to start putting machine learning and analytics to work for your business. Check out the schedule below – you can sign up for upcoming webinars and watch on demand replays of previous webinars. Got an AIOps webinar topic you'd like us to cover? Add it to the comments below. Hope to talk to you soon on a webinar!

Webinar featuring Forrester Research Analyst, Rich Lane: [The IT Operations Balancing Act - Deliver Velocity with Quality](#) – Watch the on demand replay

In this webinar, we delve into the challenges IT Operations teams face as they strive to optimize performance and speed for the digital business while ensuring service quality. The webinar includes an overview of the new BMC Helix Monitor solution and covers key topics including:

- How to support the speed required by [DevOps](#) initiatives
- The role of AI, Machine Learning and AIOps
- The importance of integration across technologies and IT disciplines

- Practical use cases for increasing agility and reducing risk

Webinar featuring Forrester Research analyst, Rich Lane: [AIOps - what's real now and what does the future hold?](#) – Watch the on demand replay

This webinar explores practical ways that an AIOps strategy can help IT Operations address the challenges of hybrid & complex environments, rapidly rising data volumes, and increased pressures from line of business teams, including:

- Why IT needs an AIOps strategy
- AIOps adoption considerations
